

# PPG INDUSTRY TALK

## OVERVIEW:

This poster will be discussing briefly about each of the topic as listed below:

- Introduction to PPG
- Data Analytics CoE
- Global Infrastructure CoE
- SAP CoE
- Customer Service

## Executive Summary

This poster is briefly about how PPG works from the inside. It involves three CoE, which is the Data Analytics, the Global Infrastructure and the SAP (System Analysis Programmed Development). They all work together to achieve their final core objective which is "To Protect and Beautify The World".

## Introduction

Since technologies are frequently used in all industries to optimize processes and deliver value, PPG Industries is taking actions to reconsider the technological landscape. Business processes are being enhanced, and advanced digital tools integrated across the organization as modernization of IT infrastructure continues. The Malaysia Technology Center plays a vital role in these efforts, serving as a hub of innovation, system development, and global IT support.

## Reflection

The career talk made me realize how important the Information and Communication Technology (ICT) is in every industry today. The speakers told me about their work and about how the company operates. I learned that the ICT is not only about computers. Information and Communication Technology can also be used to create coatings and paints that make products stronger. Their talks helped me realize how solving real problems can create an impactful company and improve the industry now. This made me feel more motivated to explore ICT in the future. ICT is the career that keeps growing, changing and creating opportunities.

## Customer Services

During the creation of product for customer:

- PPG will pass purchase order to the vendor/Supplier.
- Supplier will prepare raw material to be delivered to PPG warehouse.
- Factory will process the raw material and the final product will be passed back at the warehouse to be delivered to customer
- Customer will order from PPG received by Customer Service for product arrangement.
- After that, invoice will be given and payment will be made.
- Money will be given to the bank and PPG will instruct the bank to make payment to the vendor.

## Data Analytics CoE

### Huge amount of Raw Data Collection:

Solution: Data Driven Decision Making

- Prediction up to 3 month for better decision making
- Identify trend (area of improvement up to 2-3 years)

| Component  | University                            | Industrial                                    |
|------------|---------------------------------------|-----------------------------------------------|
| Data Size  | Small and usually organized           | Huge and messy                                |
| Complexity | Simple and less rush                  | Complex joining and partition                 |
| Execution  | Script run only until assignment done | Script run daily in line will new data update |

## Global Infrastructure CoE

### Department Operation:

Plan, Build, Run

- they plan what needs to be introduced and built for continuing business
- They build based on what the plan teams had decided based on business demands.
- They have teams all around the world as to keep services running all the time.

### MultiCloud Approach:

Their preference on using different apps based on functions

### Future IT Infrastructure

Evolution

Cloud Tech

Edge Computing

Zero-Trust Security Model

## SAP CoE

### ERP vs SAP

- ERP is a software system that provides a platform where everyone refers data at a same architecture supporting the business area(center point)
- SAP is a System Analysis Programmed Development

- SAP is a modular approach because each module is an application of its own for each area:
  - o Functional:
    - - contain application of specified area
  - o Technical:
    - - implementing, customizing, and maintaining SAP software
  - o Reporting:
    - - extracting, analyzing, and presenting business data from SAP systems for insight
